Abstracts

Monofunctional reactive diluents refer to a class of low molecular weight compounds containing a single reactive functional group. These functional groups can participate in the cross-linking or polymerization reaction of polymer materials, thereby playing a role in diluting polymer materials and improving their processing properties. In epoxy resin systems, monofunctional reactive diluents specifically refer to compounds containing one epoxy group. These epoxy groups can directly participate in the curing reaction of epoxy resins, form a cross-linked structure, and become part of the network structure of the cured product, thereby improving the physical and mechanical properties and chemical resistance of the final product. Monofunctional epoxy diluents are commonly used in coatings, adhesives, composite materials and other fields, especially in the case of low temperature curing, rapid curing or improving the flexibility of the coating film. Common monofunctional epoxy diluents include glycidyl ethers, glycidyl esters, etc.

The global Monofunctional Reactive Diluent market size was estimated at USD 974.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
