Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monograde Engine Lubricant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Monograde engine lubricant refers to lubricants with a single viscosity grade (such as SAE30, 40 or 50) that do not contain viscosity index improvers. Therefore, their viscosity varies greatly with temperature and is only suitable for working environments with a narrow temperature range. This type of lubricant is mainly used in old engines, heavy machinery or equipment with low requirements for viscosity stability. Compared with multi-grade oils, it has the characteristics of strong shear stability, good wear resistance and simple production formula, but it is not suitable for multi-temperature zones or general applications in modern engines.

The global Monograde Engine Lubricant market size was estimated at USD 373.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Monograde Engine Lubricant market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
