Abstracts

Monolithic refractories are unshaped refractory materials supplied in a ready-to-use or semi-finished state that are installed on-site to form continuous, joint-free linings for high-temperature industrial applications. These materials include castables, plastics, ramming mixes, gunning mixes, and mortars, which offer advantages such as design flexibility, faster installation, and reduced downtime compared to traditional shaped refractory bricks. They are primarily used in industries like iron and steel, cement, non-ferrous metals, glass, and petrochemicals, where they provide thermal insulation, corrosion resistance, and structural integrity in furnaces, kilns, boilers, and reactors. The market is characterized by demand for energy-efficient and longer-lasting linings, driving innovations in low-cement, ultra-low cement, and no-cement castables, alongside growing adoption in emerging economies with expanding industrial infrastructure.

The global Monolithic Refractories market size was estimated at USD 5500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
