## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monolithic Refractory for Tundish competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The monolithic refractory for tundish is to ensure that it can operate stably for a long time in high temperature and harsh environments, and can resist the erosion and thermal shock of molten steel. In the process of steel smelting, the intermediate ladle is responsible for the storage and transportation of molten steel, so it needs to have excellent fire resistance performance. According to different melting conditions, different types of amorphous refractory materials such as aluminum silicon series, magnesium series, or calcium aluminum series can be selected. Unstructured refractory materials usually refer to refractory materials without specific shapes, which exist in the form of particles or powders and are formed into the required refractory layer through pressing, spraying, and other methods. In 2024, global Monolithic Refractory for Tundish production reached approximately 698 K MT, with an average global market price of around US\$ 378 per MT. In 2024, the refractory materials industry will face enormous challenges, due to both the imbalance of market supply and demand, as well as the industry's own accumulated problems and drawbacks. In 2024, the steel industry will present a situation of high output, high cost, high export, low demand, low price, and low efficiency. The refractory materials industry is highly correlated with the steel industry, and the steel industry has a significant impact on the price transmission of the refractory materials industry. In addition, the joint restructuring and inefficient capacity exit mechanism in the refractory materials industry is not yet mature, and the supply-demand imbalance will exist for a long period of time.

The global Monolithic Refractory for Tundish market size was estimated at USD 264.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
