Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monolithic UPS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A monolithic UPS (Uninterruptible Power Supply) is a compact, highly integrated, non-modular uninterruptible power supply device that integrates core functions such as rectification, inversion, and battery management. It is suitable for scenarios with high requirements for power stability, such as small and medium-sized data centers, industrial automation, and medical equipment. The global monolithic UPS market size is expected to be approximately US\$750 million in 2024, accounting for 53.8% of the overall UPS market. Its demand is mainly driven by the growth of small and medium-power application scenarios and the dependence of traditional industries on stable power supply, but the growth rate is lower than that of modular UPS.

The global Monolithic UPS market size was estimated at USD 751.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Monolithic UPS market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
