Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monopile for Offshore Wind Power competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Monopile for Offshore Wind Power production reached approximately 1,600 units, with an average global market price of around US\$ 2 million per unit. Monopile is the most advanced type of foundation for offshore wind turbine construction. Monopiles are steel pipes driven into the seabed. The transition piece, which carries the auxiliary steel members required for safe access and operation of the wind turbine, such as docks, ladders and platforms, is then connected to the monopile foundation. Monopiles are the most commonly used foundations for offshore wind turbines: they are considered the best value for money and are used in water depths of 50 to 60 metres. The Monopile for Offshore Wind Power market is growing steadily, supported by the global transition to clean energy and the rapid expansion of offshore wind projects. As the most common type of foundation for offshore turbines, monopiles are valued for their cost-effectiveness, ease of installation, and ability to provide stable support in shallow and medium water depths. The market is shaped by strong demand from Europe and Asia-Pacific, alongside increasing interest from emerging offshore wind regions such as North America. With the trend toward larger turbines and deeper water installations, technological innovation in large-diameter monopiles is becoming a key driver for future development.

The global Monopile for Offshore Wind Power market size was estimated at USD 3200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
