## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Monopotassium Phosphite competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The chemical formula of Monopotassium Phosphite is  $H_2KO_3P$ . Various products containing Monopotassium Phosphite are sold as either fertilizers to address potassium deficiencies, or as fungicide products to manage specific disease issues.

Monopotassium Phosphite has the unique property of increasing resistance against several disease and environmental stress issues by boosting both the rate and intensity of the existing plant defense systems. Monopotassium Phosphite is a soil applied material that has recently gained attention as a method for improving plant vigor and health. Research and field experience have shown that this improvement of plant health after application of Monopotassium Phosphite is related to an increase in resistance against a variety of plant pathogens, as well as increased tolerance of many environmental stress factors, including drought stress. Global Monopotassium Phosphite key players include Van Iperen, Haifa Group, Luxembourg-Pamol, etc. Global top three players hold a share about 52%. Europe is the largest market, with a share about 39%, followed by North America and Asia-Pacific, having a total share about 45 percent. In terms of product, Liquid is the largest segment, with a share about 79%. And in terms of application, the largest application is Fertilizer, followed by Fungicide, etc.

The global Monopotassium Phosphite market size was estimated at USD 127.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
