Abstracts

Monostable rotary solenoids are electromagnetic actuators that convert electrical energy into a precise, limited-angle rotary motion (typically ranging from 25° to 95°) upon energization, returning to their default position automatically when power is removed via an integrated spring mechanism; these devices are characterized by their compact design, rapid response times, high torque output relative to size, and ability to deliver repeatable rotational movement in one direction only, making them ideal for applications requiring controlled angular displacement such as locking mechanisms, valve actuation, document sorters, medical equipment, and automotive systems where reliability and positional accuracy are critical.

The global Monostable Rotary Solenoids market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
