Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MOSFET-based eFuse competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MOSFET-based eFuse (electronic fuse) is a highly efficient, fast-acting, resettable protection device designed to safeguard electronic circuits from overcurrent, overvoltage, and thermal events. Unlike traditional fuses that permanently break the circuit in the event of a fault, MOSFET-based eFuses offer programmable protection and the ability to automatically or manually reset once the fault condition is cleared. In 2024 the production was 242,608,696 units and the average price was \$2.3 per unit. MOSFET-based eFuses offer fast response, resettable protection, programmable thresholds, and strong thermal stability, making them suitable for consumer electronics and automotive applications; driven by increasing system-level power management requirements and stricter safety and efficiency regulations, their penetration in high-reliability power and smart power-management solutions is rising, creating clear opportunities for vendors to differentiate through higher integration, lower on-resistance, and enhanced monitoring features.

The global MOSFET-based eFuse market size was estimated at USD 558.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global MOSFET-based eFuse market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts
