The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motor Controller of Electric Vehicles competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global motor controller of electric vehicle production reached approximately 18.52 million units, with an average global market price of around US\$ 361 per unit. A motor controller of electric vehicles is a critical component that manages and controls the electric motor's operation by adjusting the speed, torque, and direction based on input from the vehicle's drive system. It ensures optimal performance and energy efficiency by regulating the amount of electrical power supplied to the motor. The primary raw materials used in manufacturing EV motor controllers include semiconductors, copper, high-quality magnets, and advanced electronic components. These controllers are essential in electric vehicles, electric buses, and other forms of electric transportation. The industry generally enjoys profit margins ranging from 10% to 30%, driven by the increasing demand for energy-efficient vehicles. However, the production of motor controllers requires specialized production lines, advanced technology, and skilled labor to ensure the precision and reliability of the system in high-performance applications. The market for motor controllers of electric vehicles is rapidly expanding, driven by the global shift toward sustainable and environmentally friendly transportation solutions. As electric vehicles gain popularity due to stricter emissions regulations, government incentives, and growing consumer awareness of climate change, the demand for efficient motor controllers has surged. These controllers are essential for optimizing the performance of electric motors, ensuring smooth acceleration, energy efficiency, and better driving experience in EVs. The market is especially strong in regions such as Europe, North America, and China, where there are significant investments in EV infrastructure and production capacity. As battery

technology improves, the cost of EVs continues to decrease, making electric vehicles more accessible to a wider range of consumers. Despite challenges such as high development costs and the need for continuous technological innovation, the long-term outlook for the market remains positive. With increasing competition among manufacturers and continuous advancements in motor control technologies, the motor controller market is expected to continue its growth trajectory in the coming years, supported by the increasing demand for electric vehicles, stricter environmental policies, and improved cost efficiencies.

The global Motor Controller of Electric Vehicles market size was estimated at USD 6690.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
