Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motor Grader competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Road Grader, or Motor grader, is a construction machine with a long blade used to create a flat surface during the grading process. Typical models have three axles, with the engine and cab situated above the rear axles at one end of the vehicle and a third axle at the front end of the vehicle, with the blade in between. Certain graders can operate multiple attachments, or be used for separate tasks like underground mining. Motor graders are commonly used in the construction and maintenance of dirt roads and gravel roads. In the construction of paved roads they are used to prepare the base course to create a wide flat surface for the asphalt to be placed on. In 2024, global Motor grader production reached approximately 19,257 units, with an average global market price of around k US\$ 74.53 per unit. The growth of China's Motor grader market is driven by the advancement of highway construction, urban renewal, road widening, and bridge construction projects in central and western China, as well as growing demand in areas such as high-standard farmland construction. The continued boom in exports is driven by the deepening promotion of the Belt and Road Initiative, the increasing competitiveness of Chinese products (international recognition of their performance, reliability, and intelligence), and growing demand for infrastructure construction overseas, particularly in Asia (such as India), the United States, and Latin America. Furthermore, by application, engineering applications will account for approximately 95.28% in 2024, with a CAGR of approximately 7.49% over the next few years.

The global Motor Grader market size was estimated at USD 1435.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the

forecast period.
