Abstracts

A motor protection switch, also known as a motor protection circuit breaker (MPCB), is an electrical device designed to provide comprehensive protection for electric motors by integrating multiple functions into a single unit, including protection against overloads, short circuits, and phase failures, while also serving as an isolator to safely disconnect the motor from the power supply during maintenance or emergencies. It combines the features of a traditional circuit breaker with specialized motor protection characteristics, such as adjustable overload settings that account for motor starting currents and thermal memory to prevent rapid cycling, ensuring both operational reliability and longevity of motor-driven systems across industrial, commercial, and residential applications.
