Abstracts

The motor rotor balancing machine is a device used to detect and adjust the balance of the motor rotor. The motor rotor is the rotating part of the motor, usually composed of a shaft, rotor core, windings, bearings, etc. The balance of the rotor is crucial to the performance, stability and service life of the motor. An unbalanced rotor will cause vibration and noise during the operation of the motor, and may even cause damage to the motor, so it needs to be balanced.
