## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motor SoC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Motor SoC production will reach 185 million units, with an average selling price of \$2 per unit. A Motor SoC is a system-on-chip designed specifically for motor control applications. It integrates a microprocessor (MCU/MPU), a digital signal processor (DSP), an analog front end (AFE), power electronics control modules (such as gate drivers), and dedicated hardware accelerators (such as PWM modulators and vector control units). This single chip implements functions such as motor drive, closed-loop control, fault diagnosis, and communication protocol processing. Its core features include high integration, low power consumption, real-time responsiveness, and hardware-based support for algorithms such as Field Oriented Control (FOC), six-step commutation, and sensorless control. It is widely used in industrial servos, automotive electric drives, household appliance inverters, and robotic joint drives.

The global Motor SoC market size was estimated at USD 372.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Motor SoC market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
