Abstracts

Motor vehicle biofuels are liquid or gaseous fuels derived from biomass?such as crops (e.g., corn, sugarcane, soybeans), agricultural residues, waste oils, algae, or other organic materials?that are used to power internal combustion engines in cars, trucks, and other forms of transportation, either in pure form or, more commonly, blended with conventional petroleum-based fuels like gasoline or diesel; these biofuels include well-established types such as ethanol (often blended with gasoline) and biodiesel (blended with diesel), as well as emerging alternatives like renewable diesel, biogas, and advanced biofuels produced from non-food biomass through processes such as fermentation, transesterification, or gasification, offering a renewable and often lower-carbon alternative to fossil fuels while supporting energy diversification and reducing greenhouse gas emissions.

The global Motor Vehicle Biofuels market size was estimated at USD 178.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
