Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motorcycle ABS and TCS competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global motorcycle ABS and TCS production reached 3.711 million units, with an average selling price of US\$156 per unit. Motorcycle ABS and TCS refer to motorcycle anti-lock braking systems and traction control systems, and are core electronic control systems that enhance motorcycle active safety. ABS (Anti-lock Braking System) is an active safety device that monitors wheel speed using electronic sensors. When it detects imminent wheel lock due to emergency braking, the system automatically adjusts brake pressure via a hydraulic modulator at high frequency to prevent wheel lock, thereby maintaining vehicle steering ability and stability and shortening braking distance. Traction Control System (TCS) uses sensors (such as wheel speed sensors and inertial measurement units) to monitor the relationship between drive wheel (usually rear wheel) speed and the vehicle's actual speed. When the system detects drive wheel slip (e.g., due to overacceleration or slippery roads), it reduces engine torque by intervening in ignition timing, throttle position, or fuel injection (or even directly braking the slipping wheel) to restore tire grip and prevent skidding or spinouts caused by overacceleration. ABS has become extremely popular due to regulatory mandates (e.g., mandatory for new vehicles over 125cc in the EU, Japan, and India), and is used in nearly every vehicle type, from scooters and street bikes to sports cars, cruisers, and adventure bikes. TCS is currently primarily used in mid- to large-displacement vehicles (e.g., 250cc and above), becoming a near-standard feature on powerful sports cars, adventure bikes, and heavy cruisers. It manages the risk of rear wheel slip associated with high torque output. In the smaller displacement segment, TCS is beginning to gain popularity as a value-added feature. Upstream suppliers include chip suppliers (such as

MCUs), sensor suppliers (wheel speed sensors, IMUs), hydraulic component suppliers (valve blocks, pump bodies), and structural parts and raw material suppliers. Downstream direct customers are all motorcycle original equipment manufacturers (OEMs), such as Honda, Yamaha, Harley-Davidson, BMW, KTM, BYD, Loncin, and CFMOTO. These companies integrate their systems into new vehicles and ultimately sell them to consumers worldwide. Due to high technological barriers, the gross profit margins of ABS and TCS systems are generally substantial. For technologically advanced giants (such as Bosch), the gross profit margins for their high-end systems can reach 40% or higher.

The global Motorcycle ABS and TCS market size was estimated at USD 579.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.40% during the forecast period.
