Report Overview

A motorcycle airbag system is used in the case of frontal accidents for motorbikes. Motorbikes do not have an enclosed space like cars or trucks for the safety of drivers. Moreover, bikes have very unstable forces and a relatively high torque ratio of engines. Hence, motorbikes are considered relatively risky for riding as compared with trucks, cars, or any other means of transportation. Due to the sturdy designs of bikes, they are more prone to any harm to the vehicle as well as its rider. The motorcycle airbag system consists of electronic control units and modules embedded in the front face of the bike for the effective protection of the rider. Also, some airbags are fitted on the fuel tank and in the inner lining of the rider's jackets.

The global Motorcycle Airbag System market size was estimated at USD 138 million in 2023 and is projected to reach USD 199.84 million by 2032, exhibiting a CAGR of 4.20% during the forecast period.
