Abstracts

The motorcycle anti-fall bar, also known as a crash bar, engine guard, or frame slider, is a protective accessory designed to minimize damage to a motorcycle in the event of a tip-over or low-speed accident by creating a physical barrier between the ground and critical components such as the engine, frame, fuel tank, and fairings. Typically constructed from durable materials like steel or aluminum, these bars are mounted to the motorcycle's frame and extend outward to absorb impact, reducing repair costs and preventing more severe mechanical or cosmetic damage. They are particularly valued by touring, adventure, and cruiser motorcycle riders who prioritize both protection and preservation of their investment, with designs varying widely to accommodate different motorcycle models and riding styles.

The global Motorcycle Anti Fall Bar market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
