Report Overview

The brake lines of your brake system play a key role in brake performance and function, allowing your motorcycle to turn pedal pressure into stopping power. Most cars feature hydraulic brake systems, which use fluid to transfer the pressure applied by your foot to the brake.

The brake fluid is stored in the master cylinder and is transferred from the master cylinder to the brake calipers via the brake lines when the brake pedal is pushed. This pressure forces the calipers to clamp down on the brakes and, in turn, slow and stop the motorcycle.
