Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motorcycle Electronic Throttle Body competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Throttle Body for Motorcycle production reached approximately 78 million units, with an average global market price of around US\$ 12.5 per unit. A Motorcycle Electronic Throttle Body is a device to control the flow rate of the air taken into an engine. With an Electronic Throttle Body the depression amount of an accelerator pedal is converted to an electric signal and ECM (Engine Control Module) controls the DC motor to open or close the valve. It is possible with an Electronic Throttle Body to open or close the throttle valve in responding to the operating condition of the vehicle. Compared to a mechanical type throttle chamber, ETB has higher preciseness and accuracy of throttle valve opening control and plays an important role to improve the fuel economy.

The global Motorcycle Electronic Throttle Body market size was estimated at USD 975.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
