Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Motorcycle Hydraulic Antilock Braking System (ABS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global motorcycle hydraulic antilock braking system (ABS) production reached 2.206 million units, with an average selling price of US\$147 per unit. The motorcycle hydraulic antilock braking system (ABS) is an active safety device based on a hydraulic braking circuit. Wheel-mounted sensors monitor the speed in real time, and the electronic control unit (ECU) analyzes and determines the speed. When the system detects imminent wheel lock during emergency braking or braking on low-grip surfaces, it automatically modulates brake fluid pressure via the hydraulic control unit (modulator) at high frequencies, creating a "tap-brake" effect. The core purpose is to prevent complete wheel lock, thereby maintaining directional stability and maneuverability during braking and minimizing stopping distance. Applications encompass nearly all motorcycles, from scooters and street bikes to sports bikes, cruisers, adventure bikes, and touring bikes. Many countries and regions around the world (such as the EU, Japan, and India) have passed mandatory regulations requiring all new motorcycles with a displacement of 125cc and above to be equipped with ABS systems, significantly promoting the adoption of this technology. Upstream suppliers primarily include suppliers of core components such as electronic control units (ECUs), wheel speed sensors, hydraulic modulator valve blocks, and gear rings, as well as raw material providers such as semiconductors, metals, and plastics. Downstream customers include motorcycle manufacturers such as Honda, Yamaha, BMW, KTM, Hero, and Bajaj, who integrate ABS systems into their new models. Global motorcycle hydraulic anti-lock braking system (ABS) production capacity is highly concentrated

among a few major suppliers. Bosch and Continental, as industry leaders, have numerous production bases worldwide and significant annual production capacity. Others, such as ZF and Hitachi, also possess substantial scale-up capabilities. To meet market demand, these international giants are continuously expanding production capacity in key markets such as India and China. Furthermore, some Chinese companies, such as Yuanfeng Electronic Control and Ruili Komi, are also rapidly increasing their production capacity, primarily serving mid- and low-end models in the Chinese and Asian markets. Due to high technical barriers and patent protection in the industry, the gross profit margin of motorcycle hydraulic anti-lock braking systems (ABS) is relatively attractive. Leading companies such as Bosch and Continental typically maintain gross profit margins of 30% to 40% or even higher in their ABS business, thanks to their strong R&D capabilities, brand premiums, economies of scale, and control of core technologies. For new entrants, gross profit margins are typically lower until economies of scale are achieved. The global motorcycle hydraulic anti-lock braking system (ABS) market is experiencing steady growth, driven primarily by increasingly stringent government safety regulations, a significant increase in consumer safety awareness, and a recovery in global motorcycle sales. Europe and Asia Pacific are the largest markets, with the latter experiencing rapid growth due to its large motorcycle fleet and rapid adoption of safety standards. Competition is fierce, and the future is driven by the demand for lighter, more compact, and lower-cost ABS solutions, as well as advanced systems with integrated IMUs, to meet the needs of vehicles at different price points.

The global Motorcycle Hydraulic Antilock Braking System (ABS) market size was estimated at USD 324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
