Report Overview

A motorized control confocal microscope is a type of microscope that uses a laser to illuminate a sample and a detector to capture the emitted light. The laser scans across the sample in a series of planes, and the resulting data is used to create a 3D image of the sample. The motorized control aspect of the microscope refers to the ability to precisely control the position of the sample and the laser during the scanning process. This allows for more accurate and detailed imaging of the sample.
