Report Overview

Motorized decoiler machines generally serve as feeders for various processes, such as cutting, forming, punching, stamping and various others. These machines are also widely employed in paper pulp, textile and metal production industries, wherein reel winding and unwinding is frequently performed. Decoiler machines come in different sizes with varied configurations depending upon the metal type and size and gauge. Unlike earlier, when decoiling was done manually, automated machines are now capable of unwinding and straightening with ease. Introduction of automation in decoiling machines has improved their operability and reliability. Motorized recoiling machines are capable of handling heavy reel loads and can offer high throughput.
