### Report Overview

Motorized linear actuators convert the rotary motion of an alternating current (AC) or direct current (DC) motor into linear motion. Linear motion is produced by the motor rotating the screw of the push rod. Turning the screw clockwise or counterclockwise moves the shaft up and down in a straight line, creating a push/pull effect on the load. Electric linear actuators can be used wherever a machine is pushing, pulling, lifting, roughly positioning or rotating a load. Electric linear actuators can also move safely and completely, with accurate motion control, full operator control, and low or no maintenance requirements. It is the best solution for medical, industrial, workplace and household applications.
