Its core feature is the smooth electric opening and closing method, which combines high traffic efficiency and controllability. The door body is usually made of stainless steel or tempered glass, supports two-way or one-way traffic mode, and can flexibly adjust the opening and closing angle and speed. When the device is linked with the access control system, it can automatically release through signal instructions (such as card swiping, face recognition after passing), and has safety mechanisms such as rebound when encountering obstacles and emergency power-off release to avoid the risk of pinching or blockage.
