## Abstracts

Motors starting resistors are specialized electrical components designed to limit the inrush current and provide controlled acceleration during the startup phase of electric motors, particularly for high-inertia or heavy-load applications; they function by introducing resistance into the motor circuit initially, which is gradually reduced or bypassed as the motor gains speed, thereby preventing damage from excessive current surges, reducing mechanical stress on the motor and connected machinery, and improving the overall longevity and reliability of motor-driven systems. These resistors are commonly used across various motor types, including AC induction motors, DC motors, and slip-ring motors, in industries such as manufacturing, mining, transportation, and energy, where smooth and efficient motor starting is critical to operational safety and performance.

The global Motors Starting Resistor market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
