Abstracts

A mountain bike or mountain bicycle (abbreviated Mtn Bike or MTB) is a bicycle designed for off-road cycling. Mountain bikes share similarities with other bikes, but incorporate features designed to enhance durability and performance in rough terrain. These typically include a front or full suspension, large knobby tires, more durable wheels, more powerful brakes, and lower gear ratios for climbing steep grades. Mountain bikes are typically ridden on mountain trails, single track, fire roads, and other unpaved surfaces. This type of terrain commonly has rocks, roots, loose dirt, and steep grades. Many trails have additional TTF"s (Technical Trail Features) such as log piles, log rides, rock gardens, skinnies, gap jumps, and wall-rides. Mountain bikes are built to handle these types of terrain and features. The heavy-duty construction combined with stronger rims and wider tires has also made this style of bicycle popular with urban riders and couriers who must navigate through potholes and over curbs. Global Mountain Bicycles key players include Giant, Trek, XDS, Specialized, Merida, etc. Global top five manufacturers hold a share about 50%. China is the largest consumption market, with a share over 80%, followed by Europe and North America, total have a share over 10 percent. In terms of product, Hardtail is the largest segment, with a share over 55%. And in terms of application, the largest application is Household, followed by Commercial Use.

The global Mountain Bicycles market size was estimated at USD 6986.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
