## Abstracts

Movable imaging displays refer to self-contained, high-resolution electronic visual output devices that are designed for portability and flexible deployment across various environments, rather than being fixed in a single location. These displays typically incorporate built-in power sources, wireless connectivity options, and robust physical designs to enable easy transportation and rapid setup in diverse settings such as medical facilities, conference rooms, classrooms, trade shows, or outdoor events. Unlike traditional static monitors or projectors, movable imaging displays prioritize adaptability, often featuring lightweight materials, adjustable stands, and compatibility with multiple input sources to support dynamic usage scenarios where visual information needs to be presented clearly and efficiently on the go.

The global Movable Imaging Display market size was estimated at USD 670.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
