Abstracts

A movable power track socket, also known as a flexible power track system or a plug-in power track, is a device used to provide electrical power in a flexible and convenient manner. It consists of a track or rail installed along a surface, typically on walls or floors, with multiple sockets or outlets built into it at regular intervals. The track is designed to accommodate movable power modules that can be plugged into the sockets along its length. These power modules typically have a housing with electrical contacts that connect to the power source when inserted into the track. The benefit of a movable power track socket system is that it allows for easy and flexible access to power in various locations. It eliminates the need for fixed outlet placements and provides a convenient solution for powering devices in areas where traditional wall outlets may not be easily accessible. The movable power modules can be positioned along the track as needed, providing power exactly where it''s required.

The global Movable Power Track Socket market size was estimated at USD 133.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
