## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Moxibustion Therapy Robot competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Moxibustion Therapy Robot production reached approximately 54,511 units, with an average global market price of around US\$ 6,872 per units. A moxibustion therapy robot is an intelligent medical device designed to automate and enhance the traditional Chinese medicine practice of moxibustion, which involves burning dried mugwort (moxa) near or on specific acupuncture points to stimulate circulation and promote healing. Equipped with precise positioning systems, temperature control sensors, and safety monitoring mechanisms, the robot can accurately target treatment areas while maintaining consistent heat output and ensuring patient comfort. Many modern moxibustion robots integrate infrared imaging, AI-driven treatment customization, and programmable therapy modes to adapt to individual patient needs and therapeutic protocols. By reducing manual workload for practitioners, improving treatment consistency, and enhancing safety through real-time monitoring, moxibustion therapy robots are increasingly used in rehabilitation centers, traditional medicine clinics, and wellness facilities to blend ancient healing techniques with modern automation technology.

The global Moxibustion Therapy Robot market size was estimated at USD 375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
