## Abstracts

MPC (Multi-Party Computation) wallet development is the process of creating Multi-Party cryptocurrency wallets that enhance security by splitting a private key into multiple parts. These parts are distributed across various participants or devices, ensuring no single entity can control the entire key. Each part of the key is ineffective on its own, adding an extra layer of protection. Transactions are securely authorized when these key parts collaborate to sign the transaction, without ever reconstructing the full key in one location. This reduces the risk of hacks and unauthorized access, providing superior security for digital assets.

The global MPC (Multi-Party Computation) Wallet Development market size was estimated at USD 67.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
