Report Overview

Microwave plasma chemical vapor deposition (MPCVD) is the mainstream equipment for diamond growth. The gas sources used by MPCVD equipment mainly include hydrogen (H₂), methane (CH₄), nitrogen (N₂) and oxygen (O₂), which are cracked into H, O, N atoms or CH₂, CH₃, C₂H₂, OH and other groups under the action of microwave. Carbon containing groups (CH₂, CH₃, C₂H₂) will form gas-solid mixed interface on the diamond surface, and diamond (sp³), amorphous carbon or graphite (sp²) can be grown under the dynamic equilibrium model or non-equilibrium thermodynamic model. The etching speed of amorphous carbon or graphite (sp²) by hydrogen plasma is much faster than that of diamond (sp³), so the non diamond phase on the surface of CVD diamond is rapidly etched to achieve diamond growth. The basic structure of MPCVD equipment includes control unit, microwave unit, water cooling unit, vacuum unit, etc. The cavity is vacuumized through a vacuum unit to ensure the low vacuum state required for diamond growth. Then the control unit controls the flow rate and chamber pressure of each gas path, and leads the reaction gas source (CH₄, H₂, Ar, O₂, N₂, etc.) into the chamber and controls it at a certain chamber pressure. After the air flow is stabilized, microwave is generated through the microwave unit and guided into the cavity by the wave guide. Under the action of microwave field, the reaction gas is changed into plasma state to form a plasma ball suspended above the diamond substrate, and the substrate is heated to a certain temperature by using the high temperature of the plasma. The excess heat generated in the cavity is transmitted by the water cooling unit. In the MPCVD growth process of single crystal diamond, the optimal growth conditions are ensured by adjusting the power, gas source composition, cavity pressure and other conditions. In addition, due to the non contact between the plasma ball and the cavity wall, it ensures that there is no impurity particles in the

diamond growth process and improves the diamond quality.

The global Mpcvd Machine For Lab And Diamond Growth market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
