Abstracts

An mPOS (mobile Point of Sale) device is a portable payment terminal that allows businesses to accept card payments through mobile devices like smartphones or tablets. These devices are typically paired with a card reader, often connected via Bluetooth or a headphone jack, and can process credit or debit card transactions, including contactless payments (such as NFC-enabled cards or mobile wallets like Apple Pay). mPOS systems are particularly popular with small businesses, merchants on the go (like food trucks, market vendors), and in retail environments where portability is key. These devices often come with additional features, such as inventory management, sales reporting, and customer data collection. In 2024, global mPOS Device production reached approximately 51.32 million units , with an average global market price of around US\$ 59.32 per unit.

Rising Demand for Cashless Transactions
Consumer Preferences: As consumers increasingly prefer cashless and contactless payments for convenience and hygiene reasons, businesses are adopting mPOS solutions to cater to this demand.

Increasing Mobile Penetration
Smartphone Adoption: With the global increase in smartphone usage, businesses have found it cost-effective to convert smartphones or tablets into POS systems, reducing the need for expensive traditional POS hardware.

Cost Efficiency for Small and Medium-Sized Businesses (SMBs)
Lower Capital Investment: Traditional POS systems can require significant capital investment in both hardware and software. mPOS systems, on the other hand, are typically more affordable, offering subscription-based pricing models.

Flexibility: mPOS systems allow SMBs to scale their operations and adjust as needed. They can expand as the business grows, without heavy upfront investments.

The global mPOS Device market size was estimated at USD 3044.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
