Report Overview:

The biggest and most important component of an MRI system is the magnet.

The strength of a magnet in an MRI system is rated using a unit of measure known as a tesla. Another unit of measure commonly used with magnets is the gauss (1 tesla = 10,000 gauss). The magnets in use today in MRI systems create a magnetic field of 0.5-tesla to 2.0-tesla, or 5,000 to 20,000 gauss.

Most MRI systems use a superconducting magnet, which consists of many coils or windings of wire through which a current of electricity is passed, creating a magnetic field of up to 2.0 tesla. Maintaining such a large magnetic field requires a good deal of energy, which is accomplished by superconductivity, or reducing the resistance in the wires to almost zero.

The Global MRI Magnets Market Size was estimated at USD 354.77 million in 2023 and is projected to reach USD 508.97 million by 2029, exhibiting a CAGR of 6.20% during the forecast period.
