Abstracts

Implantable medical devices that are designated as "MRI Safe" refer to a specialized category of medical implants?such as pacemakers, neurostimulators, cochlear implants, or orthopedic hardware?that are engineered to be safely used in Magnetic Resonance Imaging (MRI) environments without causing harm to the patient or significant distortion of the diagnostic images. These devices are rigorously tested and constructed from non-ferromagnetic or weakly magnetic materials to prevent movement or heating during an MRI scan, and they include safety features such as filters or special leads to mitigate risks like induced currents or device malfunction. The classification "MRI Safe" indicates that the device poses no known hazards under specific MRI conditions, as defined by standards such as ASTM F2503, which outlines testing for magnetic field interactions, radiofrequency-induced heating, and functional disruption. This designation is critical as it expands diagnostic options for patients with implants who require MRI scans, addressing a significant limitation of earlier-generation devices that were often contraindicated for MRI use.

The global Mri Safe Implantable Device market size was estimated at USD 3250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
