Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on MS Light Guide Plate (LGP) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MS Light Guide Plates (LGP) are optical plates manufactured with optical grade styrene methyl methacrylate (SMMA). Styrene methyl methacrylate (SMMA) resin is a transparent copolymer made of MMA (Methyl methacrylate) and SM (Styrene monomer). SMMA has high transparency, high rigidity, excellent scratch resistance, good chemical resistance and very low moisture absorption. SMMA is relatively easy to process due to its very good flow properties. In 2024, global MS light guide plate production reached 83,400 tons, with an average selling price of US\$2,857 per ton and a total capacity of approximately 160,000 tons. The industry's gross profit margin is generally above 20%. Cost structure: direct materials account for approximately 91%, manufacturing costs account for approximately 7%, and labor costs account for approximately 2%. Industry chain: upstream is optical-grade MS resin, with major manufacturers including Denka, Chi Mei Industries, INEOS, and LG Chem; downstream is the optical display industry. The MS light guide plate (LGP) market is entering an evolution phase centered on material and process innovation, with thinner profiles, reduced weight and higher optical efficiency becoming R&D priorities. MS LGPs occupy a core position within the optical display value chain; optical displays, as a leading pillar of next-generation information technology, have broad applications, strong demand and rapid growth, placing high technical requirements on materials. Thanks to MS's low moisture absorption, which reduces water-induced deformation while preserving excellent optical properties, MS is progressively replacing PMMA in display-grade LGPs. Furthermore, driven by demand for customization and large-format panels, MS distinguishes itself through low hygroscopic expansion, light specific gravity and

favorable cost-performance, and is now widely applied in TV displays, computer monitors and digital signage, while enabling greater opportunities for system-level integration and customized services for downstream customers.

The global MS Light Guide Plate (LGP) market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
