Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on mSAP Substrate for AI competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. mSAP substrates for AI are high-density interconnect substrates designed specifically for packaging high-computing-power processors and large AI accelerators. They utilize a modified semi-additive process to achieve micron-level line widths and spacing and high I/O interconnects on an extremely thin seed layer, meeting high bandwidth, signal integrity, and heat dissipation requirements. Shipments of these products are estimated to reach approximately 380,000 square meters in 2024, with an average unit price estimated at approximately \$420 per square meter in 2024. Typical annual production capacity per line is estimated to be approximately 60,000 square meters. Upstream companies primarily supply polymer substrates and ABF films, ultra-thin copper foil and electroless plating solutions, photolithography and development materials, and manufacturing equipment. Midstream providers include mSAP substrate manufacturers, which perform lamination, photolithography, electroless plating, and electroplating processes. Downstream providers include packaging and testing companies and AI module manufacturers. The industry's gross profit margin varies depending on product complexity and customer bargaining power. Due to the high technical threshold and added value of mSAP for AI, the estimated gross profit margin range is 20% to 25%.

The global mSAP Substrate for AI market size was estimated at USD 1596.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.80% during the forecast period.
