Report Overview

Exosomes are a type of vesicles (Extracellular Vesicles, EVs) secreted by cells to the outside of the cell, with a size of 30-150nm, a double-layer membrane structure and a saucer-like shape, and rich contents (including nucleic acids, proteins and lipids, etc.), involved in the transfer of molecules between cells.

As an emerging technology, it has many problems, including accurately encoding and delivering targeted therapeutics, not to mention issues surrounding intellectual property and large-scale manufacturing. For diagnostic applications, products from Exosome Diagnostics are available; for therapeutic applications, although there are three listed companies focusing on exosomes - Capricor, Puretech and Reneuron, none of the company's products have actually been used in clinical practice.
