Report Overview

A mulching machine, also referred to as a forestry mulcher, forest masticator, or brushcutter, uses a rotary drum equipped with steel chipper tools ("teeth") or blades to shred vegetation. They are manufactured as application-specific tractors and as mulching attachments (?mulching heads?) for existing tracked and rubber-tired forestry tractors, skid steers, or excavators.

The global Mulcher Equipment market size is projected to reach US\$ 663.22 Million by 2028, from US\$ 481.50 million in 2021, at a CAGR of 4.60% during 2022-2028. The expansion of infrastructure and construction industries in developed as well as developing countries is a major factor to fuel the mulcher attachment equipment market. Due to increased spending on infrastructure development initiatives, the global construction business is expanding in the agricultural and industrial sectors, particularly in emerging nations. Furthermore, growth of the mulcher equipment is fueled by the expectation that demand for wood products will increase purchases of forestry mulching equipment. The need for mulcher heads is anticipated to increase as forestry-related activities such as forestry, wood production, harvesting, processing, wood pellets, and bucking trees increase. Other factors such as technological advancement, surge in adoption of precision farming, growing demand in residential area are anticipated to propel the growth of the market globally.

However, the global mulcher equipment market faces some challenges. First of all, rapid technological advancements have led to a threat of substitution in the mulcher equipment market. Second, high cost required for mulching machines are anticipated to restrain growth of the mulcher attachment equipment market. Worse still, fluctuations in raw material prices are driving the cost even higher. Finally, The safety concerns like flying objects thrown by the head and harmful dusts may stop some people from using it, thus restraining the demand.

The COVID-19 outbreak has affected the growth of the global mulcher attachment equipment industry owing to the lockdown measures in different countries and delay in manufacturing and production of excavator mulcher, and compact track loaders.

Segment by Type, the mulcher equipment can be split into drum mulcher, disc mulcher, etc. Drum mulcher is much more popular than disc mulcher and occupied the global market, with the market share up to 87.28% in 2021. As for its application, it is mainly used for right-of-way clearing and maintenance, land clearing, forest prevention and so on. Mulcher equipment is cost-effective. It provides high productivity, easy maintenance, and convenient replacement of spare parts. It also has low noise pollution, low energy consumption, and a long lifecycle. As a result, it has become an important machine in forestry and build a market position. In 2017-2021, the Right-Of-Way Clearing and Maintenance market accounted for the highest market share of the entire market, reaching 40.28% in 2021, and the corresponding market shares of land clearing, forest preservation were 22.17%, 23.83%. We forecast the Right-Of-Way Clearing and Maintenance market will continue to dominate the market and the market share of it will be 40.25% according to prediction.

On basis of geography, the mulcher equipment market is segmented into North America, Europe, Asia-Pacific, South America, Middle East and Africa, etc. The same status will remain for several years.
