## Abstracts

A Mullen Burst Tester, also known as a bursting strength tester, is a machine used to measure the bursting strength of materials like paper, cardboard, textiles, and leather. It applies hydraulic pressure to a circular area of the material until it ruptures. The pressure at which the material bursts is recorded as the bursting strength, typically expressed in kilopascals (kPa) or pounds per square inch (psi). This test is crucial for assessing the material's ability to withstand pressure and is widely used in quality control for packaging, textiles, and other industries. The Mullen Burst Tester market is experiencing a trend towards increased automation and digitalization. Manufacturers are incorporating advanced sensors, data acquisition systems, and software into their machines to provide more accurate and efficient testing. This allows for real-time data analysis, automated reporting, and integration with quality management systems. Another trend is the development of more versatile testers capable of handling a wider range of materials and testing standards. This includes machines with adjustable clamping forces, variable pressure rates, and the ability to perform different types of burst tests, such as constant rate of pressure increase or constant rate of strain. Furthermore, there's a growing demand for portable and compact Mullen Burst Testers, particularly for on-site testing and quality control in production environments. These portable devices offer convenience without compromising accuracy, enabling manufacturers to quickly assess material strength at various stages of production. Finally, the industry is focusing on improving the user-friendliness of these machines through intuitive interfaces, touch screen controls, and simplified calibration procedures. This makes the testing process more accessible to operators with varying levels of technical expertise.

The global Mullen Burst Tester market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the

forecast period.
