Abstracts

Multi-Axis Flexure Stages are a type of precision positioning equipment that can achieve precise position adjustment in three-dimensional space through the coordinated movement of multiple axes. Multi-axis flexure stages are usually composed of multiple linear motion axes and rotational motion axes, which achieve high-precision displacement and positioning through precise transmission mechanisms and control systems. Among them, the linear motion axis can achieve precise movement along a linear trajectory, while the rotational motion axis can achieve rotational movement around a certain axis. Multi-axis flexure stages have the characteristics of high precision, multiple degrees of freedom, good stability, and modular design. They are widely used in scientific research, industrial manufacturing, biomedicine and other fields.

The global Multi-Axis Flexure Stages market size was estimated at USD 78.6 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
