Abstracts

The multi-axis horizontal machining center is a high-precision, high-efficiency CNC machine tool, mainly used for the processing of complex parts. Its spindle is arranged horizontally, and the workpiece is fixed on the workbench. Through multi-axis linkage (usually including X, Y, Z axis and rotation axis), multi-angle and multi-faceted processing is achieved. Compared with the vertical machining center, the horizontal design is more suitable for processing large and heavy workpieces, and the chips are easier to discharge, which improves the processing efficiency and accuracy. The multi-axis horizontal machining center is widely used in aerospace, automobile manufacturing, energy equipment, mold manufacturing and other fields, and is particularly suitable for processing complex surfaces, deep holes and high-precision parts.

The global Multi Axis Horizontal Machining Center market size was estimated at USD 1546.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
