## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-axis Pneumatic Drilling Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A multi-axis pneumatic drilling machine is an automated device that is driven by compressed air and integrates multiple independent drilling units. It is equipped with 2 or more independent pneumatic spindles (commonly 4-12 axes) that can synchronously or independently control drilling parameters (speed, feed rate, depth, etc.). The multi-axis pneumatic drilling machine uses compressed air as the power source, and converts pressure energy into mechanical energy through a pneumatic motor or impact mechanism to drive the drill to rotate/impact. The spindle unit can be flexibly configured (such as right-angle axis, eccentric axis), and supports fast switching of different hole layouts (straight line, ring, matrix).

The global Multi-axis Pneumatic Drilling Machine market size was estimated at USD 635.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
