Abstracts

Multi Beam Side Scan Sonar (MBSSS) is an advanced underwater acoustic imaging system that combines the wide-swath coverage of traditional side scan sonar with the bathymetric precision and high-resolution seabed mapping capabilities of multi-beam echo sounders, utilizing multiple narrow, focused acoustic beams transmitted perpendicular to the vessel's track to generate detailed, co-registered imagery and topographic data of the seafloor, enabling comprehensive detection, classification, and visualization of submerged objects, geological features, and benthic habitats with enhanced accuracy, efficiency, and area coverage rates compared to conventional single-beam or dual-frequency side scan systems. The global market for Multi Beam Side Scan Sonar is experiencing robust growth, driven by rising investments in offshore oil and gas exploration, renewable energy projects such as offshore wind farms, submarine cable laying and maintenance, port and harbor development, dredging operations, and defense and security applications including mine countermeasures and underwater surveillance. Technological advancements, such as improved data processing algorithms, higher frequency options for finer resolution, integration with autonomous underwater vehicles (AUVs) and uncrewed surface vessels (USVs), and the miniaturization of systems for easier deployment, are further propelling adoption. Key market players include Teledyne Marine, Kongsberg Maritime, EdgeTech, Sonardyne, and iXblue, among others, who are focusing on product innovation, strategic partnerships, and expanding their geographic presence to capitalize on emerging opportunities in regions like Asia-Pacific and Latin America, where maritime infrastructure development and oceanographic research initiatives are accelerating. However, the market faces challenges such as high initial costs, the need for specialized operator training, and data interpretation complexities, which may restrain growth among smaller end-users or budget-constrained organizations. Despite these hurdles, increasing government funding for hydrographic surveying, environmental

monitoring, and maritime security, coupled with the growing emphasis on precise underwater data for sustainable ocean management, is expected to sustain market expansion in the coming years.

The global Multi Beam Side Scan Sonar market size was estimated at USD 180.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
