Abstracts

Multi Cancer Early Detection (MCED) refers to a class of novel diagnostic technologies designed to identify multiple types of cancer from a single, minimally invasive blood sample, typically by analyzing circulating tumor DNA (ctDNA) or other cancer-associated biomarkers in the bloodstream. These tests aim to detect cancers at early stages, often before symptoms appear, by identifying genetic, epigenetic, or proteomic signatures specific to malignancies, enabling broad screening across a population for a range of cancers simultaneously rather than targeting individual organ sites.

The global Multi Cancer Early Detection market size was estimated at USD 5240.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
