The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-channel Beamforming IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multi-channel beamforming chips are RF or mixed-signal processing chips that simultaneously manipulate the phase, gain, and timing of signals from multiple antenna channels to form directional beams. They are widely used in antenna arrays, radar, communication base stations, satellite communications, and millimeter-wave systems. Global shipments of these chips (beamformer ICs or multi-channel beamforming chips) are expected to reach approximately 52 million units in 2024, with an average unit price of approximately \$6.80 per unit in 2024. Single-line production capacity is estimated to be approximately 2 million units per year. Their upstream suppliers include high-frequency materials (such as GaAs, GaN, and SiGe substrate material providers), RF front-end components (power amplifiers, phase shifters, filters, microwave devices, and signal link components), process manufacturing and foundries, and EDA tool and IP providers. Downstream customers primarily include communications equipment manufacturers, radar system integrators, satellite communications companies, aerospace and defense system suppliers, and high-end millimeter-wave wireless infrastructure providers. Gross profit margins typically range from 30% to 50%, depending on channel count, RF performance, packaging complexity, and economies of scale. Overall, multi-channel beamforming chips are in the process of expanding from communication base stations to satellite communications, drones, and millimeter-wave radars. Driven by the surge in antenna arrays, the advancement of 5G/6G and satellite internet, and PNT (positioning, navigation, and timing), increasing numbers of channels, higher frequencies, and greater integration will become the focus of competition. Manufacturers that master high-frequency processes and the

collaborative design of RF front-ends and digital basebands will stand out in the future.

The global Multi-channel Beamforming IC market size was estimated at USD 354.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
