Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-Channel Flaw Detector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Multi-Channel Flaw Detector production reached approximately 160k units, with an average global market price of around US\$ 240 k per unit. A multichannel flaw detector is an NDT instrument that employs ultrasonic (or acoustic) techniques to detect and image internal defects such as cracks, inclusions, porosity, and delamination within materials and components. Multichannel indicates the device's ability to simultaneously drive and receive multiple probe channels for parallel data acquisition, enabling high-speed scanning of large surfaces, multi-angle inspection of complex geometries, and phased-array (PA) beamforming and imaging. Systems typically integrate precision pulser/receiver modules, high-speed A/D converters, digital signal processing (filtering, envelope detection, time/frequency analysis), per-channel gain/phase control, and real-time A/B/C/TOF/sector/SAFT displays with automatic defect recognition. Combined with scanners, PA probes, robotic manipulators and advanced software, multichannel flaw detectors are essential in steelmaking, petrochemical piping, pressure vessels, weld inspection, aerospace composites, wind turbine blades, rail and ship structures to ensure integrity and safety. The upstream of multi-channel flaw detectors includes analog/digital front-end chips (high-speed A/D, FPGA), probe and transducer manufacturing, electromechanical scanning systems, industrial-grade displays and embedded computing platforms (such as component suppliers like Intel/NVIDIA/Analog Devices/Xilinx), the midstream consists of flaw detector system integrators and software integrators (representative manufacturers such as Olympus, Baker Hughes, SONATEST, etc.), and the downstream consists of end-user enterprises and testing service organizations that

require routine non-destructive testing and quality certification, such as steel, petrochemical, power, nuclear power, aerospace, rail transportation, and shipbuilding. The annual production capacity of a single-line Multi-Channel Flaw Detector is approximately 500 units, with a gross profit margin of approximately 25%-40%.

The global Multi-Channel Flaw Detector market size was estimated at USD 386.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
