Abstracts

A multi-channel LED driver is an electronic power supply device designed to independently control and regulate the electrical current delivered to multiple separate strings or groups of LEDs, enabling precise dimming, color mixing, or dynamic lighting effects across different channels from a single unit. Unlike standard LED drivers that provide uniform output, multi-channel drivers allow for individual adjustment of each output channel, making them essential for applications requiring tunable white light, RGB/RGBW color changing, or zonal lighting control in both commercial and residential settings. These drivers often integrate advanced communication protocols such as DALI, 0-10V, or DMX to facilitate synchronized and automated lighting scenarios, enhancing energy efficiency and customization while simplifying system design by reducing the number of components required.

The global Multi Channel Led Driver market size was estimated at USD 1582.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
