Abstracts

The multi-channel needleless infusion connector is an innovative connector in the needle-free infusion system, designed to support multiple infusion channels simultaneously. It is commonly used in clinical situations where multiple medications or fluids need to be infused. Unlike traditional single-channel connectors, the multi-channel needleless infusion connector is more flexible in design, enabling parallel infusion of different fluids or medications while avoiding the risks associated with traditional needle punctures. Each channel remains sealed during use, ensuring the safety and sterility of the infusion path. This device is widely applied in medical environments such as intensive care units (ICU) and anesthesia, where continuous or multiple drug infusions are required, reducing operational complexity and the risk of needle-stick injuries. The multi-channel needleless infusion connector is a device designed to provide needle-free connections for multiple infusion channels simultaneously. This connector not only reduces the risk of needlestick injuries commonly associated with traditional infusion systems but also improves clinical convenience and efficiency through its multi-channel design. As medical technology advances and the emphasis on patient safety grows, the application of multi-channel needleless infusion connectors in hospitals and healthcare institutions is increasing, particularly in cases requiring long-term infusion therapy or the simultaneous administration of multiple medications. The future development trends focus on two main areas: First, with the diversification and personalization of patient treatment needs, multi-channel needleless infusion connectors will continue to evolve towards higher efficiency and safety. More integrated features may emerge, such as smart connectors that can automatically monitor flow rates and pressures. Second, as needle-free infusion technologies become more widespread, more hospitals and clinics are expected to adopt such products, further expanding the market. However, the promotion and application of this technology face several challenges. First, although multi-channel needleless infusion connectors offer higher safety, their relatively high

cost may pose a barrier to procurement for smaller hospitals and clinics. Second, the technical requirements for these products are higher, and their use requires healthcare personnel to possess specific expertise, necessitating additional training. Finally, some healthcare institutions have a lower acceptance of new technologies, meaning that full adoption of needle-free technologies may take more time.

The global Multi-channel Needleless Infusion Connector market size was estimated at USD 543.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
