Abstracts

A multi-channel temperature data logger is a device that can simultaneously measure and record temperature at multiple locations or from multiple sensors. Unlike single-channel data loggers, which can only monitor one temperature point at a time, multi-channel loggers are equipped with multiple input channels, each capable of connecting to a separate temperature sensor. This allows them to collect temperature data from various points in a system or environment.

The global Multi-channel Temperature Data-loggers market size was estimated at USD 882.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
